

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1.-9. (Cancelled).

10. (Currently Amended) A noise suppressor unit for a power source module, the power source module being arranged onto a circuit board of a plug-in unit, wherein the noise suppressor unit comprises a common mode choke and a holder for holding a the common mode choke,

said holder having a bottom surface and a top surface,

the noise suppressor unit comprises at least one lifting element,

said lifting element is a part of the holder,

said lifting element is an elevation which projects substantially from the middle of the top surface of the holder,

said lifting element projects through the common mode choke,

said lifting element comprises a grip surface,

said grip surface being located farther away from the holder than the outermost point of the common mode choke, and

the noise suppressor unit comprises at least one surface mounting element for surface mounting the noise suppressor onto the circuit board of the power source module.

11. (Cancelled).

12. (Currently Amended) The noise suppressor unit as claimed in claim ~~11~~ 10, wherein the lifting element is ~~meant for~~ configured to be gripped by an assembly head of an automatic assembly machine ~~for placing~~ that is configured to place the noise suppressor unit onto the circuit board of the power source module ~~with the automatic assembly machine~~.

13. (Previously Presented) The noise suppressor unit as claimed in claim 10, wherein the bottom surface of the holder is substantially even.

14. (Previously Presented) The noise suppressor unit as claimed in claim 10, wherein at least one surface mounting element is arranged in an opening in the holder so that the surface mounting element extends at least from the bottom surface of the holder to a top surface of the holder on one side of the bottom surface of the holder.

15. (Previously Presented) The noise suppressor unit as claimed in claim 10, wherein at least one surface mounting element comprises a surface mounting foot for mounting the surface mounting element to the circuit board of the power source module, and a mounting head to which the common mode choke for the noise suppressor of the power source module is coupled.

16. (Previously Presented) The noise suppressor unit as claimed in claim 10, wherein at least one mounting foot is at least partially embedded in the bottom surface of the holder.

17. (Previously Presented) The noise suppressor unit as claimed in claim 10,
wherein the bottom surface of the holder is substantially even,
wherein at least one surface mounting element comprises a surface mounting foot for mounting the surface mounting element to the circuit board of the power source module, and a mounting head to which the common mode choke for the noise suppressor of the power source module is coupled, and
wherein the mounting foot comprises a mounting surface which is substantially parallel to the bottom surface of the holder.

18. (Cancelled).

19. (Currently Amended) The noise suppressor unit as claimed in claim ~~18~~ 10, wherein the grip surface of the lifting element is substantially even.

20. (Currently Amended) The noise suppressor unit as claimed in claim ~~18~~ 10, wherein the grip surface of the lifting element is substantially even and the bottom surface of the holder is substantially even, and wherein the bottom surface of the holder and the grip surface of the lifting element are substantially parallel.
